

M8 interior frame – visible elegance meets concealed functionality

In its 2022 collection, LEICHT is bringing a new pullout system onto the market: the M8 subframe made of powder-coated steel in elegant carbon grey. Its special feature is the impressive and eponymous wall thickness of just eight millimetres. Thanks to precise finishing, the solidly welded frame is able to guarantee reliable stability as well as maximum convenience during use despite its filigree nature. It differs from conventional frames in that the guiding rail is not located on the side of the drawer, but has been positioned underneath its base. In this way, the technology of the pullout system is kept completely hidden in favour of a purist design.

With the M8 subframe, LEICHT is interpreting an effective basic of interior design in a new and elegant way. The frame is compelling with its innovative technology and forms a perfect unity of shape and functionality. It complements the existing design lines PRIMO, CONTINO and EVO and continues the elegant signature of the kitchen manufacturer from Waldstetten with its clear, purist design. The product, which is convincing in both shape and function, can be used in a variety of ways in kitchens, living rooms and bathrooms of modern buildings and makes the decisive difference thanks to its attention to detail.

Because LEICHT does not only focus on the obvious – subtle functions and design decisions as exemplified by the purist M8 pullout system contribute to an aesthetically compelling, holistic look in interior design.
